

Submission Links and Test-Case Evidence

Bruno Pedro | Student ID: 22074709 | DESD Resit

This document records the final public links and the test-case coverage I implemented for my individual Bristol Regional Food Network submission.

Public Links

Git repository: <https://github.com/brunopedro2910/DESD>

Project management board:

https://app.notion.com/p/BRFN-Test-Cases-Task-Board-ae1fabe4c27d82c1b631810d263ac7d9?source=copy_link

Access check: I used these as my final public evidence links for submission.

Implemented Test Cases

Test	What I implemented
TC-001	I implemented producer registration with business details, a producer role and a protected producer profile.
TC-002	I implemented customer registration with contact details, terms acceptance and a saved delivery address.
TC-003	I implemented producer-owned product creation with price, stock, season, allergens, dates and optional images.
TC-004	I implemented available-product browsing across eight categories.
TC-005	I implemented available-product search across product names, descriptions and producer names.
TC-006	I implemented persistent baskets with add, update, remove, stock validation and producer information.
TC-007	I implemented single-producer checkout with a simulated payment, 48-hour lead time and 5/95 financial split.
TC-008	I implemented one customer transaction that creates separate supplier orders for each producer.
TC-009	I implemented a producer-only dispatch board containing delivery, customer, product and financial details.
TC-010	I implemented controlled order-status progression, customer notifications, update notes and an audit timeline.
TC-011	I implemented producer-owned inventory editing, stock deduction, low-stock thresholds and unavailable-product filtering.
TC-012	I implemented seven-day settlement generation from delivered supplier orders and producer settlement history.
TC-013	I implemented food-mile calculations from producer coordinates to Bristol city centre.
TC-014	I implemented organic product records and an organic-only market filter.
TC-015	I implemented reusable allergens, allergen notes and product-page warnings.
TC-016	I implemented seasonal start/end months, wrap-around season logic and visible season status.
TC-017	I implemented community accounts whose checkouts are recorded as bulk orders with instructions.
TC-018	I implemented restaurant recurring schedules with create, pause, resume and cancel controls.
TC-019	I implemented time-limited surplus offers with validated 10-50% discounts and discounted basket pricing.
TC-020	I implemented producer stories and recipes that can be linked to relevant products.
TC-021	I implemented order history, availability-aware reordering and downloadable CSV receipts.
TC-022	I implemented password validation and hashing, CSRF protection, login throttling, login audits, secure-session options and role/ownership checks.
TC-023	I implemented product-specific low-stock thresholds and producer notifications after checkout.
TC-024	I implemented verified-purchase reviews, one review per customer/product, rating summaries and producer-response storage.
TC-025	I implemented staff-only 5% commission reporting with date/producer filters and CSV export.

Ownership statement: I completed this version as my own individual project work and recorded my contribution as 100% in my contribution matrix.
